Description

- ▣ Resolution

RESOLUTION NO. _____

A RESOLUTION OF THE MAYOR AND CITY COMMISSION OF THE CITY OF MIAMI BEACH, FLORIDA, DIRECTING THE ADMINISTRATION TO PRIORITIZE, AS PART OF THE FY 2025 BUDGET PROCESS, FUNDING FOR IMPROVEMENTS TO ADDRESS THE WATER QUALITY CONCERNS RELATING TO THE PARK VIEW ISLAND CANAL.

WHEREAS, the City of Miami Beach is committed to maintaining and improving the quality of its waterways and Biscayne Bay as they are critical to environmental, economic, and recreational prosperity, and to the health, safety, and welfare of the citizens of the City of Miami Beach; and

WHEREAS, following a sanitary sewer overflow caused by a contractor in March of 2020, the high bacteria levels did not decrease to meet State parameters, and a “No Contact Advisory” has been issued for the Park View Canal Kayak Launch location since that time; and

WHEREAS, the City implemented various strategies to isolate potential sanitary sewer leaks, including multiple dye testing, deep cleaning of the stormwater lines, water quality testing throughout the stormwater system, sediment sampling in the canal, CCTV inspections, and smoke testing to determine potential illegal cross connections between private properties sewer lines and the City's stormwater system; and

WHEREAS, the City performed advanced gene biomarker analysis to identify fecal indicators for humans, dogs, or birds at locations within the canal, and the results of the analysis in 2020 and 2021 indicated that fecal coliform from dogs and birds were present at high concentrations in samples; and

WHEREAS, the City retained ESciences, a third-party consultant specializing in environmental investigations, to conduct a thorough analysis of the data which indicated more studies were necessary to draw conclusions in the data set, as trends could not be identified; and

WHEREAS, in light of the continued elevated levels, the City procured the services of Dr. Solo-Gabriele, Associate Dean for the University of Miami College of Engineering, a global water quality expert in evaluating microbes in water and sediments; and

WHEREAS, Dr. Solo-Gabriele and the University of Miami team conducted a four-month sampling study to help determine the geographic or point-source(s) of bacteria; and

WHEREAS, the study discovered that freshwater surface layer of the canal had higher levels of bacteria, and that rainfall was the main predictor of poor water quality in the canal, with sediments from the canal shoreline, the streets, and sediments in catch

basins, and shallow groundwater entering the canal from the 81-acre catchment area to the east and despite rigorous sanitary sewer testing, the system including private connections is aging and cannot be ruled out; and

WHEREAS, the study identified many sources contributing to degraded water quality including exotic and feral animal feces, the homeless population, dog waste, litter, and leaking dumpsters in commercial areas; and

WHEREAS, a community workshop was held in North Beach on January 24, 2023, and the draft final report with the study's recommendations was released via Letter to Commission (LTC) and on MBRisingAbove.com on January 23, 2023, for public comment through February 24, 2023; and

WHEREAS, City staff from several Departments have worked to address many of these findings by providing an increased level of services, and have developed an action plan that combines the study recommendations with actions that include both funded and unfunded items; and

WHEREAS, several impactful short-, mid- and long-term recommended actions were identified that include dredging within the Park View Canal to increase flushing and targeted stormwater and sanitary sewer infrastructure improvements; and

WHEREAS, the Environment and Sustainability Department (the "Department") was allocated \$500K in funding in FY 2023 for Phase 1 of Park View Canal dredging, which includes for planning, design, and permitting; and

WHEREAS, the Department has procured and negotiated this work with a selected consultant and FY 2024/2025 tasks include pre-application meetings with environmental regulatory agencies, bathymetric survey, geotechnical analysis, hydraulic/flushing analysis, DERM/FDEP/ACOE permit application preparation, response to requests for additional information and permit issuance, construction plans and technical specifications, determination of probable cost to complete, and prepare bid package or assist the CMB in preparation; and

WHEREAS, the Department was allocated \$2 million in the FY 2024 - 2028 Capital Budget for Phase 2 of Park View Canal dredging, with construction anticipated to be completed in FY 2026/2027; and

WHEREAS, the Public Works Department was allocated \$510,000 in FY 2023 funds and completed pipe lining to 95% of the gravity sanitary sewer pipes and 98% of the manholes in Park View Island, and lining of Pump Station No. 23; and

WHEREAS, the Public Works Department was allocated a total of \$2.5 million in FY 2024 for rehabilitation of manholes and additional pipe lining in the area east of Parkview Island (from 72nd St to 75th St), which contributes to the Park View system, lining of Pump Station No. 23, and 250 linear feet of force main replacement at Pump

Station 19 is anticipated to be completed in FY 2024; and

WHEREAS, the Public Works Department completed Park View Extended Area in January 2024, that consisted of lining every single pipe except a few that were in great shape, which addressed all manholes needed rehabilitation; and

WHEREAS, the Public Works Department was allocated \$200K in FY 2023 for design and permitting and \$2M for construction to retrofit existing gravity stormwater system with water quality treatment devices to minimize litter and sediments from entering the waterway, anticipated to be completed in FY 2025; and

WHEREAS, the North Beach Town Center-North Shore D Neighborhood Improvement Project will include design and replacement of the stormwater and sanitary sewer infrastructure in the catchment area; this would include outfall relocations and water quality treatment pump stations; and

WHEREAS, on December 13, 2024 the City Commission authorized the City Administration to procure the services of Dr. Solo-Gabriele to conduct a post-study on the water quality in the Park View Island Canal, in order to determine whether the water quality has improved following the completion of proposed short-term remedial measures; and further, providing that the total amount of the post-study shall not exceed \$75,000; and

WHEREAS, the Environment and Sustainability Department has worked with Dr. Solo-Gabriele to finalize the scope of services for the study planned to be conducted during the summer of 2024.

NOW, THEREFORE, BE IT DULY RESOLVED BY THE MAYOR AND CITY COMMISSION OF THE CITY OF MIAMI BEACH, FLORIDA, that the Mayor and City Commission hereby direct the Administration to prioritize, as part of the FY 2025 budget process, funding for improvements to address the water quality concerns within Park View Island Canal.

PASSED AND ADOPTED this ____ day of March 13, 2024.
