

## MEMORANDUM

To: Grant Webster  
City of Miami Beach

From: Adrian K. Dabkowski, P.E., PTOE

Date: April 3, 2025

**Subject: 1100 Lincoln Road  
Traffic Impact Statement**

The purpose of this memorandum is to summarize the traffic impact statement prepared for the proposed repurposing of the property located at 1100 Lincoln Road in Miami Beach, Florida. The property proposed for repurposing is currently occupied by an approximately 78,000 square-foot movie theater with 18 movie screens. The proposed repurposing will replace the movie theater with an approximate 78,000 square-foot museum. The proposed museum will consist mostly of interactive art exhibits and will provide an ancillary food and beverage service for museum patrons. Note that no modifications are proposed to the existing structure, existing parking garage, existing parking operations, or existing loading operations. A project location map and conceptual site plan are provided in Attachment A. Kimley-Horn and Associates, Inc. has completed this traffic impact statement consistent with the approved City of Miami Beach methodology. The approved methodology detailing the traffic impact statement requirements is included in Attachment B. The following sections summarize the project trip generation calculations, parking evaluation, project operations narrative, loading operations narrative, and transportation demand management (TDM) strategies.

## TRIP GENERATION

Trip generation calculations for the existing development and proposed repurposing were performed using the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11<sup>th</sup> Edition. The trip generation for the existing development was determined using ITE Land Use Code (LUC) 445 (Movie Theater). The trip generation for the proposed repurposing was determined using ITE LUC 580 (Museum). Note the existing movie theater is not operational during the weekday A.M. peak hour (one hour between 7-9 A.M.). Furthermore, the museum is also not expected to be operational during the weekday A.M. peak hour (one hour between 7-9 A.M.).

A multimodal (public transit, bicycle, and pedestrian) factor based on US Census *Means of Transportation to Work* data was reviewed for the census tract in the vicinity of the redevelopment. The US Census data indicated that there is a 33.5% percent (33.5%) multimodal factor within the vicinity of the redevelopment. However, to provide a conservative analysis and to be consistent with guidance from the City of Miami Beach, a multimodal factor of 20.0 percent (20.0%) was applied to the trip generation calculations instead. It is expected that a portion of employees and visitors will choose to walk, bike, or use public transit to and from the proposed repurposing.

Three (3) Miami-Dade County Department of Transportation and Public Works (DPTW) routes and one (1) City of Miami Beach trolley operate currently operate within the vicinity of the site during the A.M. and P.M. peak hours. Detailed transit route information is included in Attachment C.

- **DTPW Route 15** operates along 17 Street in the vicinity of the project site with the nearest stop located west of Lenox Avenue. This route operates with 30-minute headways in the eastbound and westbound directions during the A.M and P.M. peak hours.
- **DTPW Route 20** operates along Alton Road in the vicinity of the project site with the nearest stop located south of Lincoln Road. This route operates with 30-minute headways in the eastbound and westbound directions during the A.M and P.M. peak hours.
- **DTPW Route 101** operates along Alton Road in the vicinity of the project site with the nearest stop located north of Lincoln Road. This route operates with 30-minute headways in the northbound and southbound directions during the A.M and P.M. peak hours.
- **City of Miami Beach Trolley South Beach Loop** operates along Alton Road in the vicinity of the project site with the nearest stop located south of Lincoln Road. This route operates with approximately 20-minute headways in the northbound and southbound directions during the A.M and P.M. peak hours.

As shown in Table 1, the project is expected to result in a reduction of 190 net new weekday P.M. peak hour vehicular trips. Detailed trip generation information is included in Attachment D.

Table 1: P.M. Peak Hour Trip Generation Summary				
Land Use (ITE Code)	Scale	Entering Trips	Exiting Trips	Net New External Trips
<i>Existing Development</i>				
Movie Theater (445)	18 movie screens	99	102	201
<i>Proposed Redevelopment</i>				
Museum (580)	78,000 square feet	2	9	11
<b>Net New Project Trips</b>		<b>-97</b>	<b>-93</b>	<b>-190</b>

## PARKING EVALUATION

No changes are proposed to the existing six-story parking garage. The parking requirement for the existing movie theater was 280 spaces at the time of original approval. The parking garage currently provides 280 parking spaces per the as-built plans included in Attachment E. Note that, per the City of Miami Beach *Code of Ordinances 5.2.4.3(a)(4)*, parking is not required for the existing movie theater use or the proposed museum use. Nonetheless, the existing parking garage will be maintained as-is to provide parking for employees, patrons, and the public.

Note that valet parking is currently not provided for the existing movie theater and will not be provided for the proposed repurposing.

## PROJECT OPERATIONS NARRATIVE

The proposed museum will consist mostly of interactive art exhibits staged within the existing movie theaters. An ancillary food and beverage service will be staged in the existing lobby area and will serve museum patrons throughout the interactive art experience. This service will provide packaged food and drinks and a dedicated dining area will not be provided. Given the scale and proposed operations of the food and beverage service, it is not expected to generate external trips.

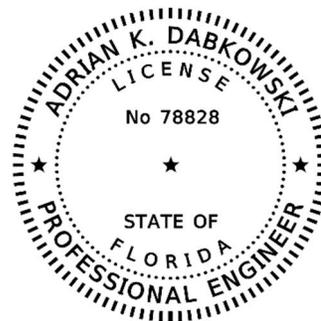

The proposed museum is expected to operate from 11:00 A.M. to 12:00 A.M. Any proposed modifications to this schedule will comply with the requirements outlined in the City of Miami Beach *Code of Ordinances*.

## LOADING OPERATIONS NARRATIVE

As no changes are proposed to site access, the existing building, or the existing parking garage, loading and refuse operations will continue to operate as they currently do. Loading, unloading, and refuse collection will occur in the Lincoln Lane S alley south of the existing building. Loading and refuse vehicles will enter the loading area via 16 Street, east of Alton Road and will exit the loading area via Lincoln Lane S at Lenox Avenue.

## TRANSPORTATION DEMAND MANAGEMENT STRATEGIES

As the proposed repurposing results in a reduction in external vehicular trips, transportation demand management (TDM) strategies are not required as the repurposing itself reduces the impact of traffic on the surrounding roadway network. Additionally, there are eight (8) bicycle racks currently provided along Alton Road adjacent to the site. The applicant is willing to coordinate with the City of Miami Beach regarding the placement of bicycle racks adjacent to the site along Lincoln Road to further encourage bicycle mobility.

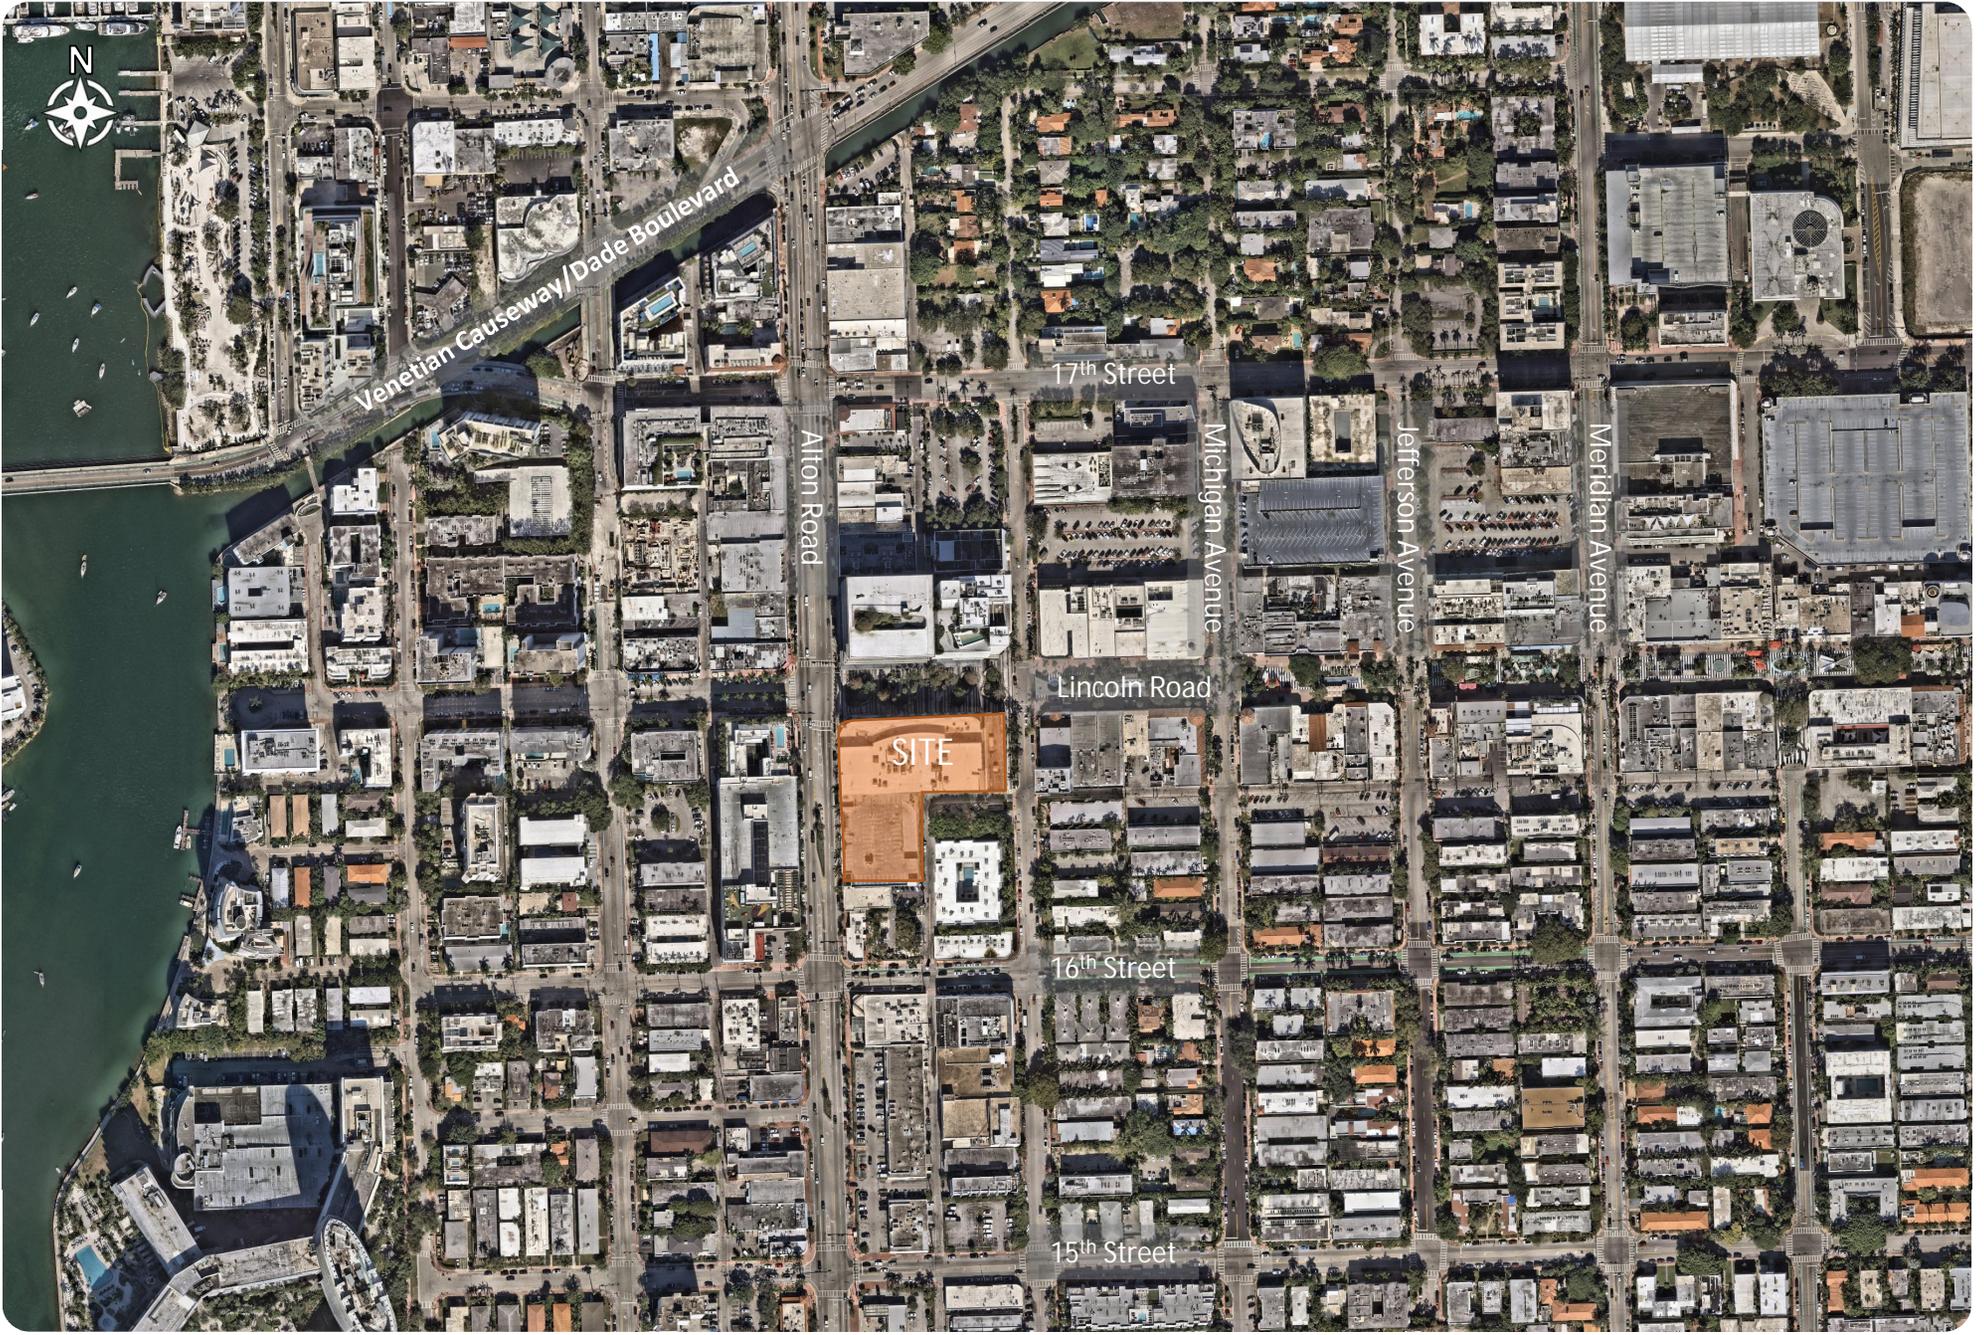

This item has been digitally signed and sealed by Adrian K. Dabkowski, P.E., PTOE, on the date adjacent to the seal.

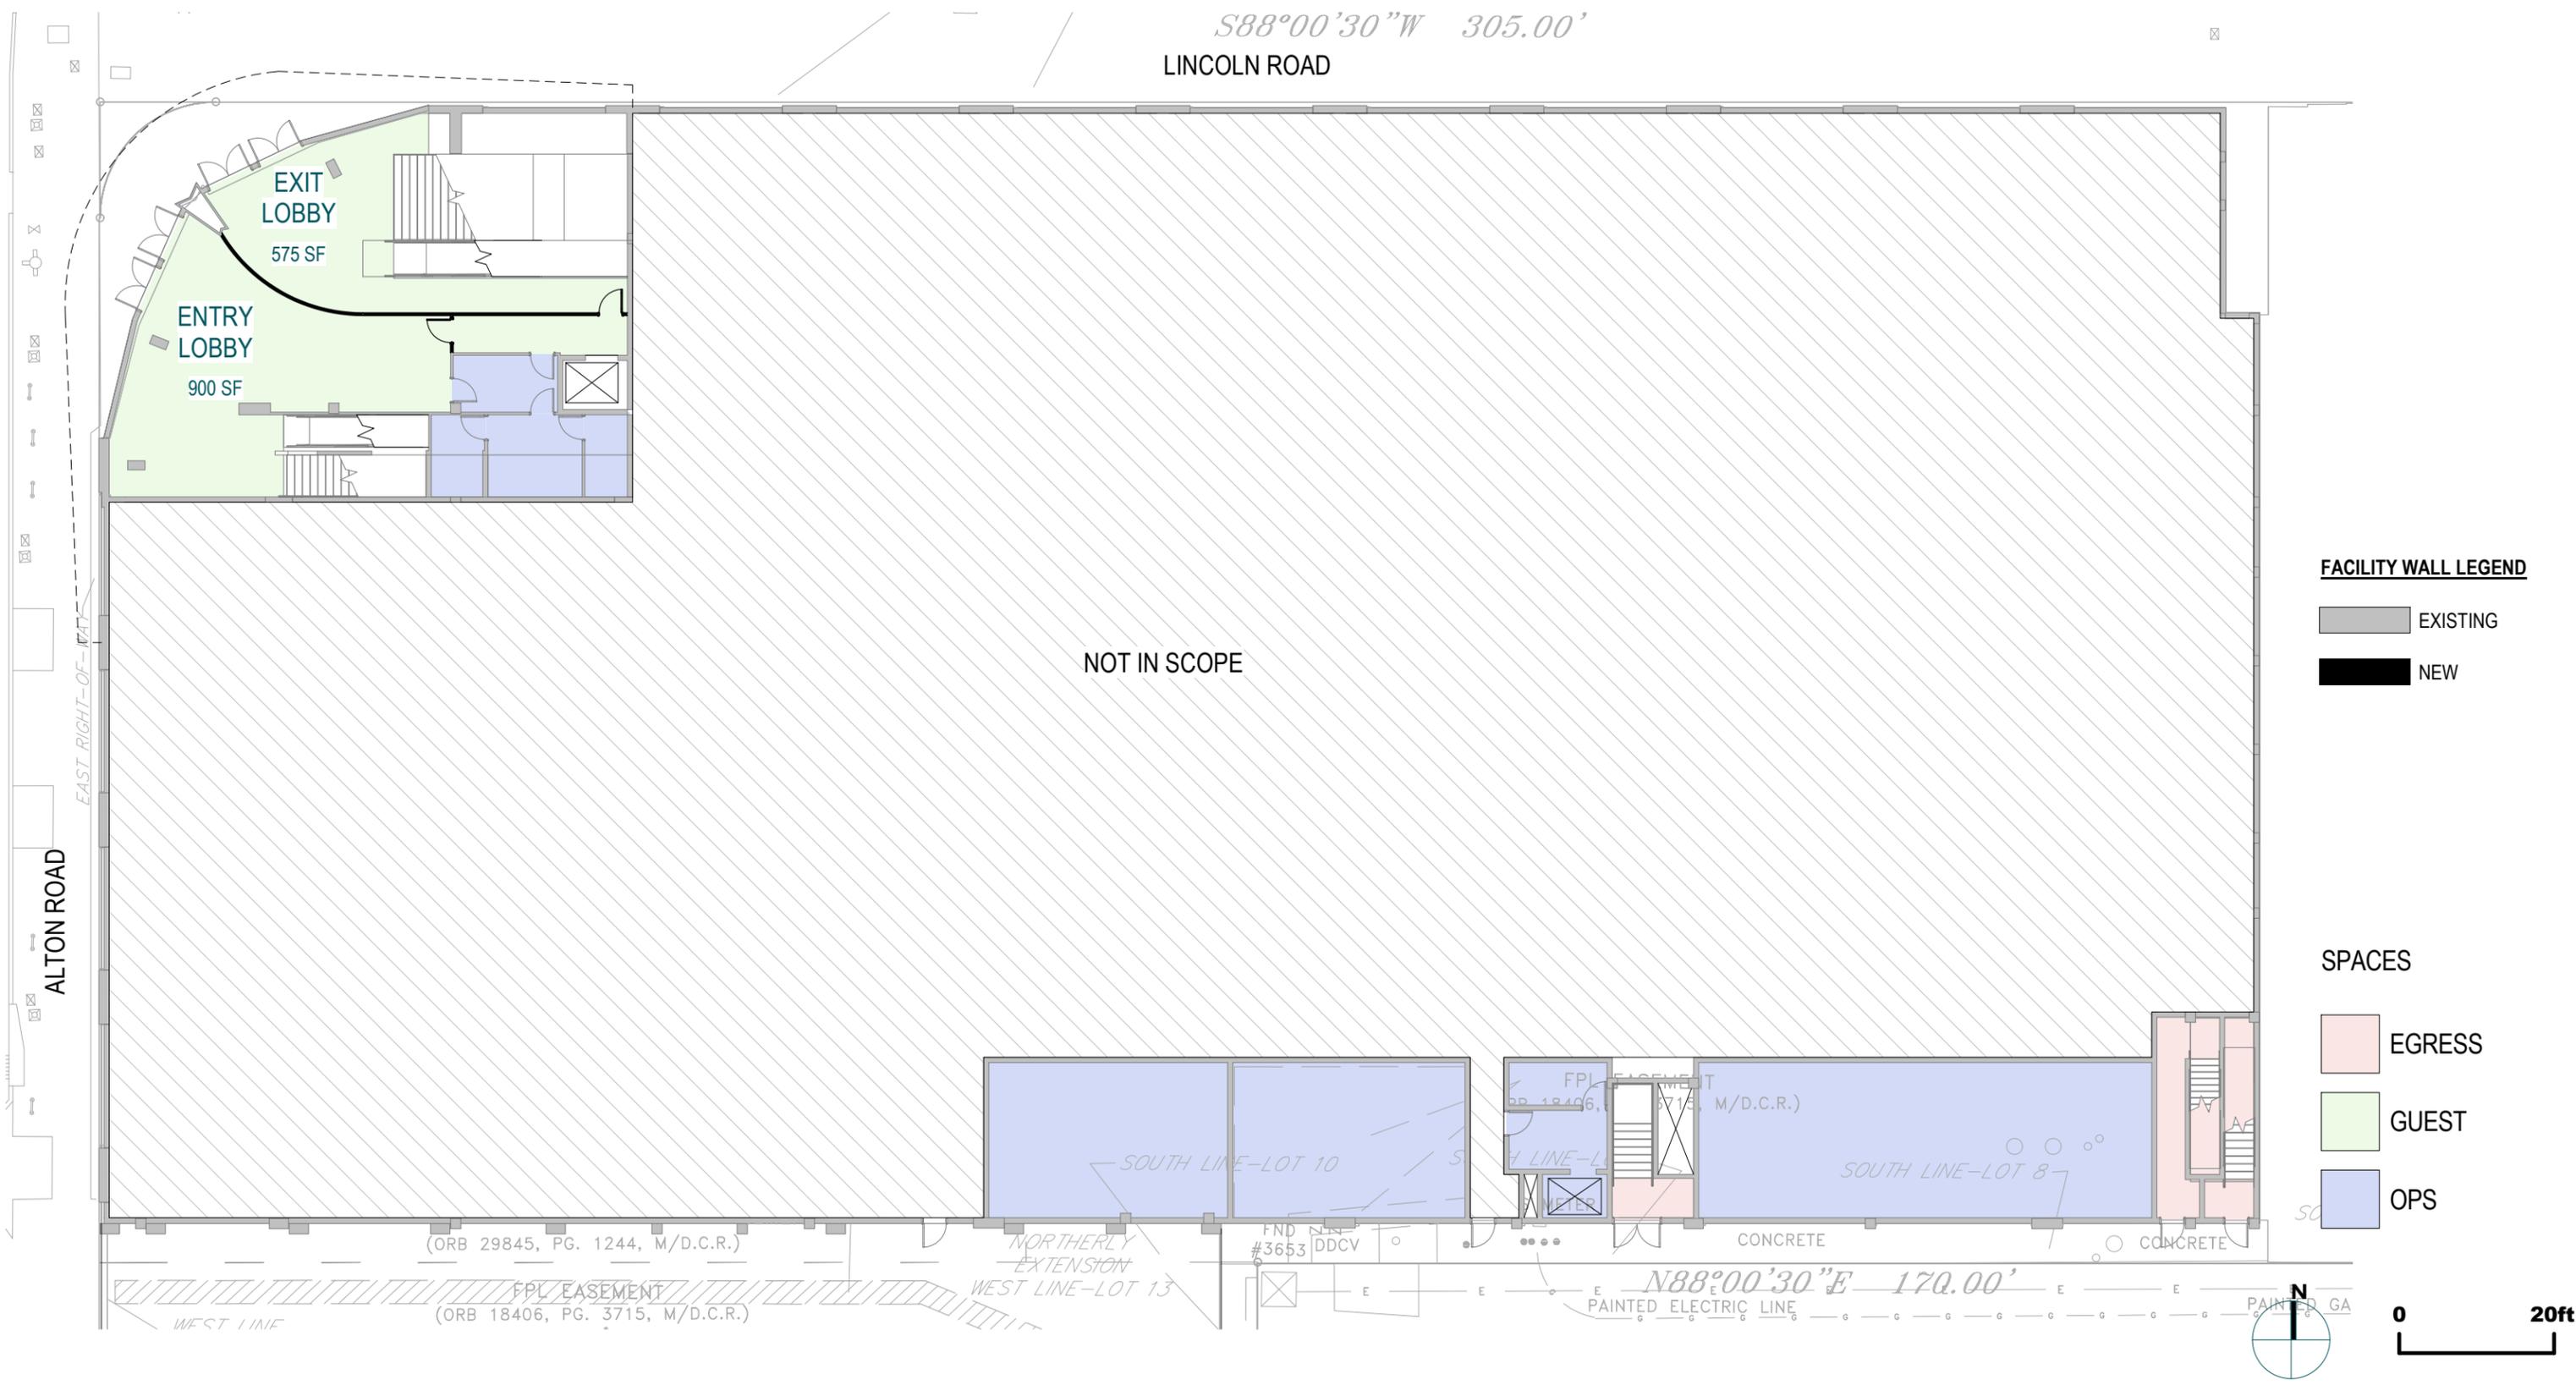

Printed copies of this document are not considered signed and sealed and the signature must be verified on any electronic copies.

Good afternoon Paul,

Hope you had a great weekend. FYI, the Methodology for 1100 Lincoln Road was approved. Feel free to submit the Traffic Impact Statement to TRN25-0033 once it's ready.

Thank you

Best

## MEMORANDUM

To: Grant Webster  
City of Miami Beach

From: Adrian K. Dabkowski, P.E., PTOE 

Date: February 6, 2025

**Subject: 1100 Lincoln Road  
Traffic Assessment Methodology**

The purpose of this memorandum is to summarize the traffic assessment methodology for the repurposing of the property located at 1100 Lincoln Road in Miami Beach, Florida. The property proposed for repurposing is currently occupied by an approximately 78,000 square-foot movie theater with 18 movie screens. The proposed repurposing will replace the movie theater with an approximate 78,000 square-foot museum. Note that no modifications are proposed to the existing structure, existing parking garage, existing parking operations, or existing loading operations. A location map and conceptual site plan are included in Attachment A. The anticipated build-out year for the site is 2026. The following sections summarize our proposed methodology.

### TRIP GENERATION

Trip generation calculations for the existing development and proposed repurposing were performed using the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11<sup>th</sup> Edition. The trip generation for the existing development was determined using ITE Land Use Code (LUC) 445 (Movie Theater). The trip generation for the proposed repurposing was determined using ITE LUC 580 (Museum). Note the existing movie theater is not operational during the weekday A.M. peak hour (one hour between 7-9 A.M.). Furthermore, the museum is also not expected to be operational during the weekday A.M. peak hour (one hour between 7-9 A.M.).

A multimodal (public transit, bicycle, and pedestrian) factor based on US Census *Means of Transportation to Work* data was reviewed for the census tract in the vicinity of the redevelopment. The US Census data indicated that there is a 33.5% percent (33.5%) multimodal factor within the vicinity of the redevelopment. However, to provide a conservative analysis and to be consistent with guidance from the City of Miami Beach, a multimodal factor of 20.0 percent (20.0%) was applied to the trip generation calculations instead. It is expected that a portion of employees and visitors will choose to walk, bike, or use public transit to and from the proposed repurposing. Transit route information will be documented in the report. Detailed trip generation calculations and US Census *Means of Transportation to Work* data are included in Attachment B.

The project is expected to result in a reduction of 190 net new vehicle trips during the P.M. peak hour. Detailed trip generation calculations are included as Attachment B.

As the proposed repurposing is expected to result in a reduction in peak hour trips, analyses of external intersections are not proposed. Additionally, as no changes are proposed to the existing parking garage, existing parking operations, or existing loading operations analyses of the existing entry gates and garage maneuverability are not proposed.

## **PARKING EVALUATION**

A summary of the proposed on-site parking supply, including conventional parking spaces, mechanical-lift spaces, ADA spaces, and bicycle parking, will be prepared and included as part of the traffic assessment and compared to the number of required parking spaces calculated by the architect per City of Miami Beach requirements. Note that repurposing program parking requirements will be documented in the traffic assessment.

## **PROJECT OPERATIONS NARRATIVE**

Details regarding proposed museum operations will be described in the traffic assessment. This narrative will include details regarding the proposed museum along with the proposed ancillary food and beverage service that will be provided within the museum.

## **LOADING OPERATIONS NARRATIVE**

Details regarding site loading and refuse operations will be described in the traffic assessment. This narrative will include details regarding loading and refuse vehicle access, location of loading areas, and loading and refuse vehicle circulation within the site.

## **TRANSPORTATION DEMAND MANAGEMENT STRATEGIES**

Transportation Demand Management (TDM) strategies will be developed to reduce the impact of project traffic on the surrounding roadway network and promote trip reduction. Typical measures promote bicycling and walking, encourage car/vanpooling and offer alternatives to the typical workday hours.

## **DOCUMENTATION**

The results of the traffic analysis will be summarized in a technical memorandum. The memorandum will also include text and graphics necessary to summarize the assumptions and analysis.

## Table Notes

---

### Means of Transportation to Work

**Survey/Program:** American Community Survey

**Universe:** Workers 16 years and over

**Year:** 2023

**Estimates:** 5-Year

**Table ID:** B08301

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units and the group quarters population states and counties.

Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the [Methodology](#) section.

Source: U.S. Census Bureau, 2019-2023 American Community Survey 5-Year Estimates

ACS data generally reflect the geographic boundaries of legal and statistical areas as of January 1 of the estimate year. For more information, see [Geographic Boundaries by Year](#).

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

Users must consider potential differences in geographic boundaries, questionnaire content or coding, or other methodological issues when comparing ACS data from different years. Statistically significant differences shown in ACS Comparison Profiles, or in data users' own analysis, may be the result of these differences and thus might not necessarily reflect changes to the social, economic, housing, or demographic characteristics being compared. For more information, see [Comparing ACS Data](#).

Workers include members of the Armed Forces and civilians who were at work last week.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

-

The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.

N

The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area.

(X)

The estimate or margin of error is not applicable or not available.

median-

The median falls in the lowest interval of an open-ended distribution (for example "2,500-")

median+

The median falls in the highest interval of an open-ended distribution (for example "250,000+").

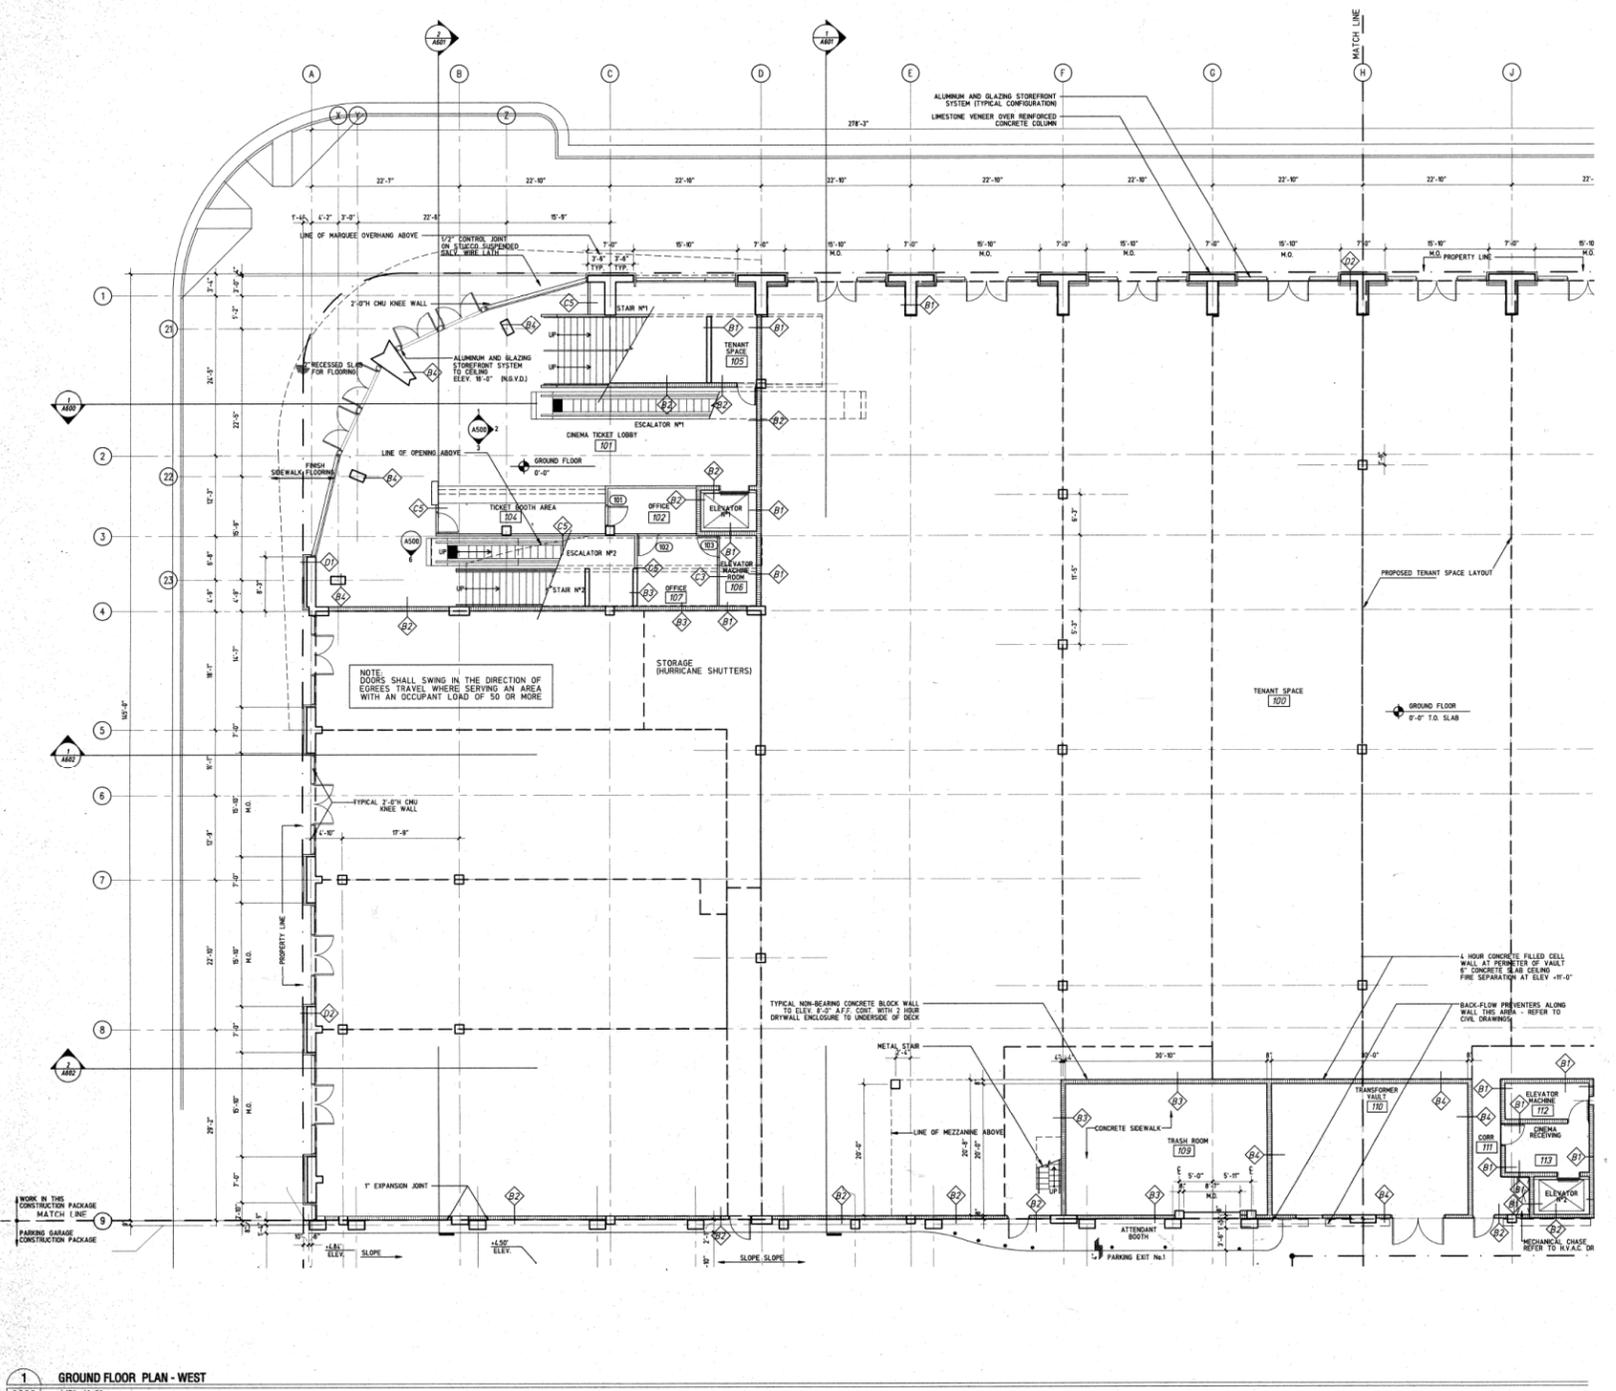

\*\*

The margin of error could not be computed because there were an insufficient number of sample observations.

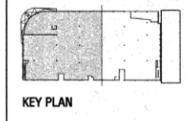

\*\*\*
